DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 17-20 and 23-24 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding to claims 17-20, which are method claims, and that these method claims do not fall within one of the four statutory categories of inventions. Supreme Court precedent and recent Federal Circuit decisions indicate a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. For example there is not apparatus mentioned either in the preamble nor in the subsequent limitations for executing the method, nor is the obtaining, calculating, multiplying or shifting steps, In re Bilski, 88 USPQ2d 1385 (Fed. Cir. 2008).

Regarding to claim 23-24, which recites "A program for decoding an image using a computer, said program causing the computer to execute the following steps..", and the body of the claim recites a series of steps that is drawn to a computer program per se and is therefore, directed to non-statutory subject matter.

Allowable Subject Matter

3. Claims 21-22 are allowed.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Chen et al (US 6,934,677) discloses quantization matrices based on critical band pattern information for digital audio wherein quantization bands differ from critical bands.

b. Song et al (US 2004/0190610 A1) discloses a method and an apparatus for coding and decoding moving pictures.
